

## NITRO RIGGING HMA LINKS INSTRUCTIONS

### **DESCRIPTION:**

Nitro Rigging links are used to connect Nitro Rigging canopy lines to risers. The links come in two sizes, a shorter one for most main canopies and a longer version for Tandem canopies using type 7 webbing as risers. Nitro Rigging links are built from HMA 900 lbs.

### **TOOLS RECOMMENDED:**

A pair of hemostats, a heavy needle, some waxed cord, a pair of scissors.

**PROCEDURE:**

*1. Start by passing the knot-end of the link into the risers*

*2. Use the hemostats to pull the loop-end of the link through the line loops*

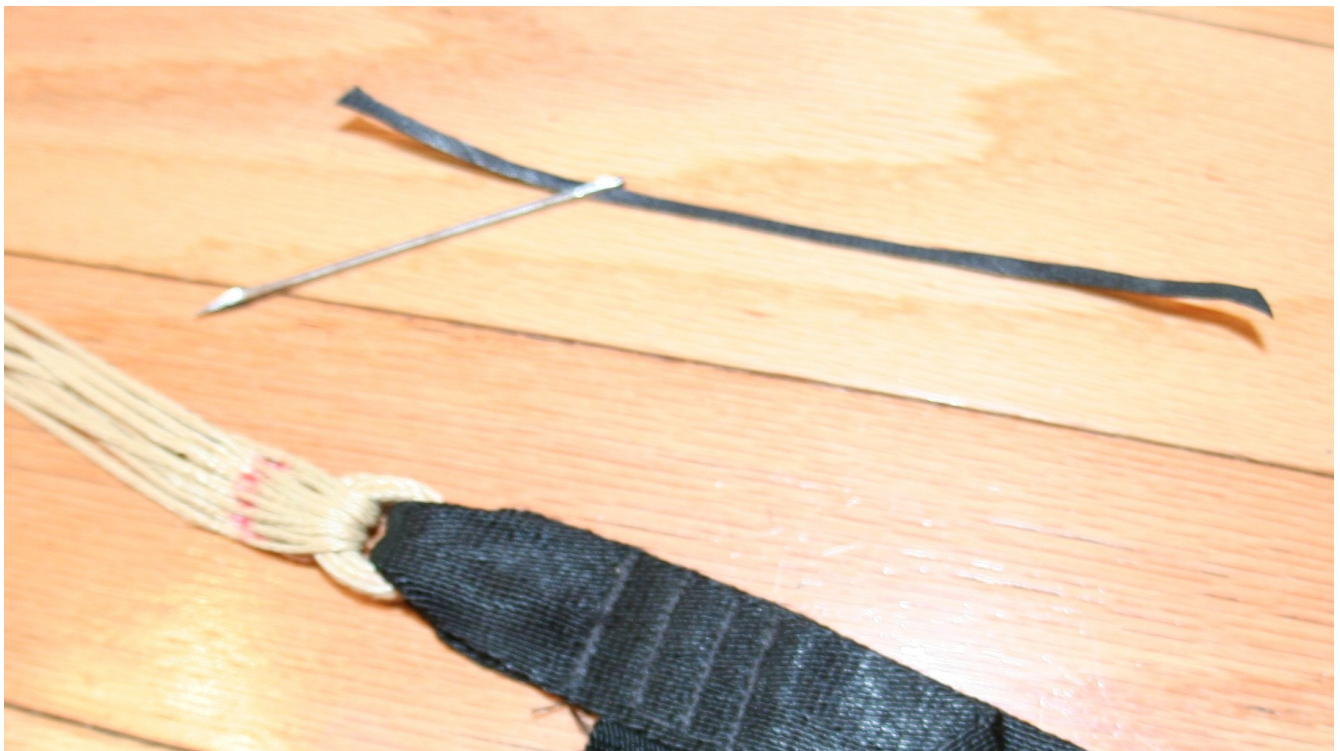

*3. Repeat step 2*

***4. Use the hemostats to grasp the loop-end and pass it through the knot-end-loop of the link***

*5. Use the hemostats to grab the knot and pass it through the loop-end of the links*

***6. Pull the loop end tight against the knot and push the locked knot assembly into the middle of the riser so that no part is exposed***

***7. Pull the waxed cord through the risers twice sandwiching the locked knot assembly***

***8. Tie a surgeon knot followed by an overhead knot in the opposite twist***

*Done you are! Nitro Rigging risers, lines, and links ready for fun!*
